

POWERCYL II

INSTALLATION & COMMISSIONING INSTRUCTIONS

Ensure that all secondary fittings are suitable for mains pressure. If a shower is installed, it will be necessary to check with the shower manufacturer that it is suitable for mains pressure.

TO INSTALL THE POWERCYL II REPLACEMENT UNIT

First drain and flush the system thoroughly. Ensure that the feed and expansion system will accept the expansion of water from the boiler, pipework and radiators plus the capacity of the POWERCYL II. (See the example calculation).

F & E cistern to allow for expansion from primary system plus 100 litres cylinder capacity.

Example : boiler + radiators + pipework = 75
 PowerCyl = 100
 Total = 175 litres 4% expansion = 7 litres

Disconnect and remove the existing cylinder and cold water storage cistern if required (figure 2).

Fit the POWERCYL II replacement unit, connecting the primary flow and return pipes to the primary tapings on the unit (figure 3). Connect a mains cold supply to the "cold inlet" tapping on the plate heat exchanger.

Connect the hot supply to the taps to the "hot outlet" tapping on the plate heat exchanger.

Fill the system, ensuring that the cap on the automatic air vent is loose, so that air is released from the POWERCYL II until it is full. Open each hot tap in turn to clear air from the secondary distribution pipes.

With close coupled cold feed and vent as shown in the sketch, it is a requirement that there must be an open path from the cold feed to the boiler return. This is deemed to be provided by the 3-port valve which can not close both the ports at the same time i.e. either the port to the radiator circuit or the port to the cylinder is always open. If individual 2-port valves are fitted for space heating and hot water, then a by-pass valve of lock shield pattern must be fitted to ensure that a return path is open. This applies to conventional cylinders and PowerCyl.

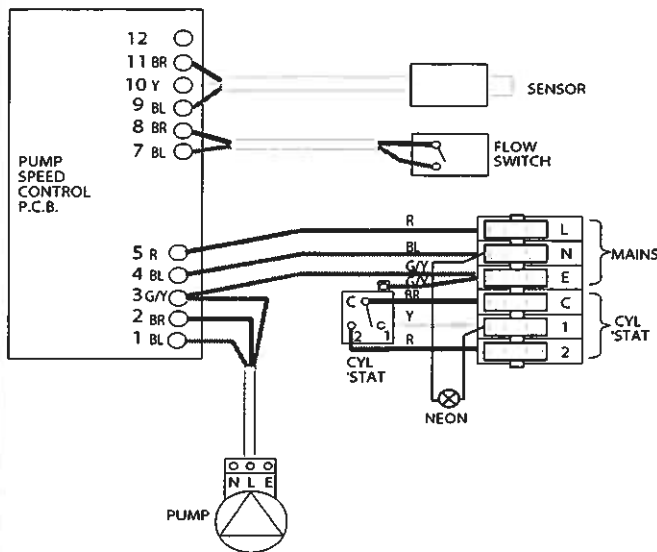

USER NOTES

The PowerCyl II is operating efficiently if the neon light goes out when the boiler switches off. If the light stays on ensure the boiler thermostat is set to maximum, if it is at maximum turn down the PowerCyl thermostat until the neon light goes off.

ELECTRICAL CONNECTIONS

The power supply to the heating/hot water system should be via a mains voltage isolator located within 1 metre of the boiler, fused to 3A. The connections marked C, 1 and 2 on the strip connector are connected directly to the corresponding connections on the cylinder thermostat. They should therefore be connected in the normal way. There must also be a permanent live, neutral and earth connected to the L, N and E connections in order to power the pump speed control PCB. This must be taken from the heating/hot water system supply (not from an independant source).

COMMISSIONING

The boiler thermostat must be set to maximum.

The POWERCYL II thermostat is pre-set to 73°C.

Fire the boiler with the heating turned off. Check that the POWERCYL II neon is on.

Wait for the boiler to go off, and check that the neon goes off at the same time. This ensures that the boiler is capable of heating the POWERCYL II to its correct temperature.

Turn on a hot tap and check that the water temperature is around 50°C at various flow rates.

Check out the heating controls in the normal way.

TO REPLACE THE PLATE HEAT EXCHANGER

Switch off the electrical supply to the system.

Isolate the primary side by closing the isolation valve on the inlet, and one of the pump valves on the outlet. Close the mains stop tap, and open all outlets. Drain to below the level of the plate heat exchanger.

The four union joints on the plate heat exchanger can now be undone, and the replacement fitted.

Open the stop tap and flush air through all outlets, then close them. Open the two isolation valves previously closed. Check for leaks. Switch on the electrical supply and re-commission the system.

TO REPLACE THE FLOW SWITCH

Switch off the electrical supply to the system.

Close the stop tap and open all outlets. Drain to below the level of the plate heat exchanger. The flow switch can now be removed by undoing the two compression joints and pulling off the two spade connectors. Replace the flow switch and re-connect the wires.

Open the stop tap and flush air through all outlets, then close them. Check for leaks, then switch on the electrical supply and re-commission the system.

Remove existing cold water storage cistern and cylinder.

Fit PowerCyl II and connect mains cold feed
